

# Thank you for your patience while we work to improve your service

As part of PSE's work to improve the reliability of your electric service, we'll install approximately two miles of new underground distribution feeder cable along Blakely Ave NE between NE Bucklin Hill Road and NE Oddfellows Road.

This new feeder will provide redundancy to the electric system in the neighborhood and, because it will be underground, it won't be prone to wind- and tree-related outages.

Preparation work for this new cable installation will begin in early July, while installation and road restoration work will continue through October 2017. Work hours will typically be Monday through Friday from 8 a.m. to 4 p.m.

During construction, sections of one lane on Blakely Ave NE will be intermittently closed after 8:30 a.m. and flaggers will direct traffic. Expect limited delays.
